It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  as soon as it is available and the accession number will

                                            * NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (18-OCT-2000) NIH Intramural Sequencing Center, 8717 Grovemont Circle, Gaithersburg, MD 20877, USA

RESULT 1 AAT96577

AAT96577 standard; DNA; 583 BP.

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Up regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis,

                                                                                                                                                                                                                                                                                                                                                                                                        CC bcl-w gene (see AAXD5132) and encodes Bcl-w protein (see AAYD5532), a CC pro-survival member of the Bcl-2 family which is widely expressed CC and which is essential for spermatogenesis. The invention relates CC generally to a method of treatment and to an animal model for the CC inducting or reducing fertility of male animals. Wethods are CC inducing or reducing fertility of male animals. Wethods are CC provided for the treatment of infertility, or for reducing CC fertility, by modulating spermatogenesis. An animal model carries CC a mutation is at least one allele of the human or murine bcl-w gene CC or in a gene associated with bcl-w. Such animals have disorganised CC seminferous tubules and are substantially infertile, but possess no CC other major abnormalities as determined by histological examination. CC genetic sequences capable of inducing, enhancing or otherwise CC facilitating spermatogenesis in animals, or which can induce
                                                                                                                                                                                                                                                                                                 Matches

The present sequence is the human bcl-w gene encoding Bcl-w protein (see AAY05530), a pro-survival member of the Bcl-2 family which is contial for spermatogenesis. The clivention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility, or animals. Methods are provided for the treatment of infertility, or contains. Methods are provided for the treatment of infertility, or contains and contains a mutation is at least one allele of the human or mutation bcl-w gene or in a gene associated with bcl-w. Such animals make bcl-w gene or in a gene associated with bcl-w. Such animals infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    05-JUL-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAX25132 standard; DNA;

The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders

CC specification also describes rat bel-y protein (Rbcl-y). Rbcl-y and CC Hbcl-y are homologues of the bcl-2 protein thought to be involved in CC programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y CC proteins may be used to treat conditions associated with a disruption of CC the cell death pathway. If they act as cell death inhibitors, they may be CC used in therapies to treat subjects suffering from: strokes, head trauma, CC (especially multiple sclerosis), myocardial infarction, vitally induced CC (ell death, aging, spinal cord injuries and amyotrophic lateral CC sclerosis conditions where cells under go premature cell death as a CC result of triggers which may or may not be apparent. They may also be CC used in this way to develop cell lines which remain viable in culture for CC an extended period. In contrast, if they act as cell death stimulators, CC prolonged cell life span such as cancer (especially kaposi's sarcoma and CC lung cancer) and auto/hyperimmune diseases. They may also be used to cause cell death in, and hence control, parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В

The bcl-2 family have both apoptotic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell death is desired.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 2; Column 13/14; 27pp; English.

                                                                                                                                                                                                                                                                                                                             The present sequence encodes rat bcl-y protein (Rbcl-y). The specification also describes human bcl-y protein (Hbcl-y). Rbcl-y and CC Hbcl-y are homologues of the bcl-2 protein thought to be involved in CC programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y CC proteins may be used to treat conditions associated with a disruption of CC used in therapies to treat subjects suffering from: strokes, head trauma, CC (especially multiple sclerosis), myocardial infarction, vitally induced CC ell death, aging, spinal cord injuries and amyotrophic lateral CC sclerosis- conditions where cells under go premature cell death as a CC used in this way to develop cell lines which remain viable in culture for Rhcl-v and Hhcl-v may he used to treat conditions second lines and coll death as a coll death as a coll death says to develop cell lines which remain viable in culture for Rhcl-v and Hhcl-v may he used to treat conditions as a cell death stimulators,
                                                                                                                                                                                                                                Matches 547;
                                                                                                                                                                                                                                                    Query Match

The present sequence is the mouse bcl-w gene encoding Bcl-w protein (see ANYO5531), a pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or

for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or model carries a mutation is at least one allele of the human or murine bcl-w gene or in a gene associated with bcl-w. Such animal have disorganised seminferous tubules and are substantially have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which can induce infertility.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 family. This gene promotes cell survival, so its modulation is useful in family. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, bypoxia, ischaemia, human immunodeficiency virus infection or in cell hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell transplants. Up-regulation of develop new lines, to facilitate lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w during genetic modification. It can be used to produce recombinant Bcl-w during denetic modification. It can be used to produce recombinant Bcl-w during denetic modification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid encoding apoptosis related gene bcl-w - used to induce or inhibit cell survival, e.g. for treatment of cancer and

                                                     fertility, by modulating spermatogenesis. An animal specific spene associated with bcl-w. Such animals have disorganised other major abnormalities as determined by infertile, but possess no They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise that the sequences of the sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Qy
                                                                                                                                                                                                             The present sequence is described as a derivative of the mouse bcl-w gene (see AAX25133) and encodes Bcl-w protein (see AAY05533), and which is essential for spermatogenesis. The invention relates identification of molecules and general to an animal model for the inducing or reducing fertility of male animals. Methods are fertility, by modulating spermatogenesis. An animal model carries a mutation of the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries
                                             facilitating spermatogenesis in animals, or which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        used in the method of the invention. The products of the cione can be used for treating conditions associated with abnormal expression of the polypeptides. They can be used for e.g. treating chronic inflammatory diseases, immunological disorders, autoimmune diseases, inflammatory diseases, various allergies, and as anti-infectious agents. The products can also be used for detection and diagnosis.

from the human cDNA clone HGBGZ64 (deposited as clone ATCC 97902 and ATCC 209048) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human the fusion proteins by linking to the gene to a human the fused protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic which are useful for preventing, treating or ameliorating medical medical manufactures and their fragments (nucleic which are useful for preventing, treating or ameliorating medical
conditions e.g. by protein or gene therapy. Also, pathological
                                                                                                                                                                                                                      New isolated human genes and the secreted polypeptide(s) they encode useful for diagnosis and treatment of e.g. cancers, neurological

Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see AAV59511 for described uses).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      131 ccgctgcaccaagccatgcgggcagckggagatgagttcgagacccgcttccggcgcacc

                                 CC nucleic acid probes for measuring gene expression in a sample derived CC from human breast and BT 474 cells. The method involves contacting CC the probes with a collection of detectably labelled nucleic acids CC derived from mRNA of human breast, and then measuring the label CC bound to each probe of the microarray. The probes are useful for CC verifying the expression of regions of genomic DNA predicted to CC encode proteins. They are useful for gene discovery, and for CC expression analysis is useful for assessing the toxicity of chemical CC expression analysis is useful for assessing the toxicity of chemical CC diversity of probes for measuring gene expression, with far less bias CC rapid production of functional information from genomic sequence. The CC resent sequence is a single exon nucleic acid probe of the invention. CC Note: The sequence data for this patent did not form part of the CC printed specification, but was obtained in electronic format directly considered to the patent of the method at the patent of the consideration from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ωy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ъ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene or in a gene associated with bcl-w. Such animals have disorganised seminferrous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which can induce infertility.

                                                                                                                                                                                                                                                                                                                                                         This sequence encodes a novel gene, bcl-w, from the mouse bcl-2 gene family. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bcl-w; apop

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     301
The present sequence is described as a derivative of the mouse bcl-w gene (see AAX25133) and encodes Bcl-w protein (see AAX95533), pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries fertility, is at least one allele of the human or murine bcl-w gene

The bcl-2 family have both apoptotic activity and the apoptosis blocking activity, bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its

CC The present sequence encodes rat bcl-y protein (Rbcl-y). The Specification also describes human bcl-y protein (Hbcl-y). Rbcl-y and CC Hbcl-y are homologues of the bcl-2 protein thought to be involved in CC programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y CC proteins may be used to treat conditions associated with a disruption of CC used in therapies to treat subjects suffering from: strokes, head trauma, CC (especially multiple sclerosis), myocardial infarction, vitally induced CC (especially multiple sclerosis), myocardial infarction, vitally induced CC cell death, aging, spinal cord injuries and amyotrophic lateral CC cresult of triggers which may or may not be apparent. They may also be CC used in this way to develop cell lines which remain viable in culture for CC an extended period. In contrast, if they act as cell death stimulators, CC Rbcl-y and Hbcl-y may be used to treat conditions associated with CC prolonged cell life span such as cancer (especially kaposi's sarcoma and CC lung cancer) and auto/hyperimmune diseases. They may also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAX15945

Can animals. Methods are provided for the treatment of infertility, can animal for reducing fertility, by modulating spermatogenesis. An animal for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or model carries a mutation is at least one allele of the human or murine bcl-w gene or in a gene associated with bcl-w. Such animal murine bcl-w gene or in a gene associated with bcl-w. Such animal have disorganised seminferous tubules and are substantially have disorganised seminferous tubules and are substantially by histological examination. They can be used to screen for by histological examination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              An animal model exhibiting reduced levels of a Bcl-w protein and/or protein associated with Bcl-w \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the human bcl-w gene encoding Bcl-w protein (see AAY05530), a pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 3; Page 32; 52pp; English.

                                                                                                                                                                                                                                                                                                                 auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential modulators.

           The present sequence is described as a derivative of the human bcl-w gene (see AAX25132) and encodes Bcl-w protein (see AAY05532), pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the inducing or reducing fertility of male animals. Wethods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries
    fertility, by modulating spermatogenesis. a mutation is at least one allele of the

     Alzheimer's Disease, neural and muscular degenerative diseases (especially multiple sclerosis), myocardial infarction, vitally induced sclerosis conditions where cells under go premature cell death as a used in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, prolonged cell life span such as cancer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune diseases. They may also be used to cause cell death in, and hence control, parasites.
                                                                                                                                                                                                               The present sequence encodes human bcl-y protein (Hbcl-y). The specification also describes rat bcl-y protein (Rbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein thought to be involved in programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y proteins may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: Strokes, head trauma, and the conditions associated with a disruption of used in therapies to treat subjects suffering from: Strokes, head trauma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23-FEB-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (AUCK-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is the nucleotide sequence of the cDNA clone Bcl-like (HAICH29), used in the method of the invention. The products of the clone can be used for treating conditions associated with abnormal expression of the polypeptides. They can be used for e.g. treating chronic inflammatory diseases, immunological disorders, autoimmune diseases, inflammatory diseases, various allergies, and as anti-infectious agents. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotides and encoded polypeptides - used to develop products for treating e.g. inflammatory diseases, infections, immunological disorders, autoimmune diseases, allergies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21-JAN-1997;

ATCC 209048) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human finmunoglobulin Fc portion (e.g. AAV59502) for increasing the stability the fused protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-V59812; amino acid sequences AAW74731-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological
                                                                                                                                                                   New isolated human genes and the secreted polypeptide(s) they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders
                                                                                                                                                                                                                                                                                                                                                                                         22-AUG-1997

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed j

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arterioscierosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

The invention relates to a spatially-addressable set of single exon convolete acid probes for measuring gene expression in a sample derived from human breast and Br 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids convolved from mRNA of human breast, and then measuring the label convolved from the expression of regions of genomic DNA predicted to convolving the expression of regions of genomic DNA predicted to convolving the expression of regions of genomic DNA predicted to convolving the expression and/or prognosing breast disease. Gene capter of the expression and/or prognosing breast disease. Gene convolving the probes of the microarray of this invention presents a far greater convolving to probes for measuring gene expression, with far less bias convolving production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Convolving the production, but was obtained in electronic format directly convolving the production of the property of the sequence data for this patent did not form part of the convolving production of the production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 15
